# b2b.store

January 2021.1 Release Notes

Hello b2b.store customers,

Here's our first monthly update for 2021! A *huge* feature and some enhancements out of the blocks at the start of the year as we focus on lots of backend features and enhancements coming to b2b.store throughout 2021. These future additions are going to streamline the management of your b2b.store when it comes to products and users, so stay tuned.

Language Support

We're really excited to announce that starting with this release, b2b.store now has the capability to display in languages other than English!

b2b.store is already used in countries outside of the UK, and now it can display in the relevant language, it's going to help drive-up sales further in those countries.

How can I get this feature in a b2b.store for the benefit of my customers?

Please talk to us if you would like in-app language support within your b2b.store(s), it's a really straight forward process.

NOTES:
- Each language requires a separate b2b.store, a single b2b.store does *not* support more than one language at the same time.
- Additional translation charges may apply.

b2b.store Enhancements & Fixes

1. **Promotions Tiles**: Home screen tiles for Promotions (**PROMOTED** and/or **BADGE_ONE** in your Products CSV) should be *dynamic*. That means, if you did have promotions in your Products CSV, but no longer have any in a new Products CSV, the promotional Home screen tiles would not display. If you then had promotions back on, these Home screen tiles would auto-magically reappear. Cool! Well, something went pear shaped between what was supposed to happen and reality! Reality has now prevailed and promotional Home screen tiles now appear/disappear/reappear when they are supposed to.

2. **Username**: We've standardised Username and CustomerID throughout the app and emails. b2b.store was using similar wording (Username/Customer ID/CustID) to mean different things. This has been made much clearer and standardised throughout b2b.store. The most visible thing you and your customers will notice is that on the Login screen, the field for **Customer ID** is no longer called that, it's called...wait for it...**Username**. So a Username is a Username (used to login for example), and a Customer ID is a Customer ID (you may refer to them with a pre-existing number for example).

3. **Products List**: On larger screens, when products are listed and displayed side-by-side, odd looking grey gaps no longer appear and the list is visually balanced...which just looks *right*.

4. **Order Summary Emails**: At the end of each day, you will be receiving all orders as a helpful single Order Summary Email. However, this Order Summary Email was missing **Order Notes** and **Fulfilment Options** (date/times) the customer had typed/selected. Not helpful! So those details have been re-added and now appear back in the Order Summary Email...yay!

b2b.store Public API

Our amazing developers have made significant additions and enhancements to the b2b.store **_Orders_** Public API this month.

We use this Public API internally ourselves, and so can you, to streamline getting orders into your ERP system, for example.

1.1.0 - 2021-01-20

Adds multiple new features to control how data is returned.

Breaking Changes

- Orders and Order Items will now return 50 items by default instead of 500. If required then the old behaviour can be opted into by adding *perPage=500* to the request

New Features

- Added pagination to orders and order items
  - Pagination can be controlled via the *page* and *perPage* query parameters
- Added multiget for users and orders. Simply separate requested ids with commas
- Added sorting to Orders and Order Items via *sort* parameter
  - Orders can be sorted by *createdAt*, and *totalPrice*
  - Order Items can be sorted by *createdAt*, *price*, and *quantity*
- Added filtering to Orders and Order Items
  - Orders can be filtered by *costsMore*, *costsLess*, *createdAfter*, *createdBefore*, *fulfilmentType*, and *reference*
  - Order Items can be filtered by *costsMore*, and *costsLess*

To see more of the b2b.store Public API, simply visit:
- your.b2b.store/admin/api/v1/docs
- your.b2b.store/admin/api/v1/spec

Email us for your API Key if you don't already have it.

BEAM Admin: New Features, Enhancements & Fixes
Version: 2021.01 (2.40.0-50a331d)

1. **Category Banners**: Any banners without a CTA (Call To Action) button would display 0 for **Clicked Count** and **Actioned**. This has been changed to *N/A* rather than 0. Zero implied no-one had interacted with the banner, but that's not possible anyway if users cannot interact with it.

This version of BEAM (**2021.01 (2.40.0-50a331d)**) is available immediately:
https://www.beamplatform.io/

Feedback

We hope you enjoy getting familiar with these new features and enhancements but if you have any feedback or questions at all, or you would like to request a feature, please email: carlin.easton@rnfdigital.com.

See you in February!
